

A Retirement Gender Gap

Don Akridge, MBA, CFP®, CPA/PFS
U.S. Marine Corps Veteran – Emory University Alumnus

What is the retirement outlook for the average fifty-something working woman? As a generalization, less sunny than that of a man in her age group. A middle-class woman may end up less ready to retire than a middle-class man.

Most middle-class retirees get their income from three sources. An influential 2016 National Institute on Retirement Security study called them the “three-legged stool” of retirement. Social Security provides some of that income, retirement account distributions some more, and pensions complement those two sources for a fortunate few.¹

For many retirees today, that “three-legged stool” may appear broken or wobbly. Pension income may be non-existent, and retirement accounts too small to provide sufficient financial support. The problem is even more pronounced for women because of a few factors.¹

When it comes to median earnings per gender, women earn 80 percent of what men make. The gender pay gap actually varies depending on career choice, educational level, work experience, and job tenure, but it tends to be greater among older workers.²

At the median salary level, this gap costs women about \$419,000 over a 40-year career. Earnings aside, there is also the reality that women often spend fewer years in the workplace than men. They may leave work to raise children or care for spouses or relatives. This means fewer years of contributions to tax-favored retirement accounts and fewer years of employment by which to determine Social Security income. In fact, the most recent snapshot (2015) shows an average yearly Social Security benefit of \$18,000 for men and \$14,184 for women. An average female Social Security recipient receives 79 percent of what the average male Social Security recipient gets.^{2,3}

How may you plan to overcome this retirement gender gap? The clear answers are to invest and save more, earlier in life, to make the catch-up contributions to retirement accounts starting at age 50, to negotiate the pay you truly deserve at work all your career, and even to work longer.

There are no easy answers here. They all require initiative and dedication. Combine some or all of them with insight from a financial professional, and you may find yourself closing the retirement gender gap.
